

## Remote Desktop Connection: The Condensed Version

For MAC and Android users, you need to download the Microsoft Remote Desktop app from the store once for each device.

### To Connect:

1. Go to the Remote Desktop Web Access site -> <https://rd.assiniboine.net>
2. Login using your College network username and password
3. Click on the "...Remote Desktop Connection" button
4. **[Chrome users only]** a small file will download. You need to open the file to continue.  
Click on the file name in the bottom left corner of your web browser
5. A security warning may appear; click Okay to continue
6. A second login box may appear, if it does
  1. At the username prompt, enter "mainc\" followed by your network username.  
Example: if your network username is "frank" you would enter "mainc\frank"
  2. At the password prompt, enter your network password.
7. Your desktop will appear
8. Start using this "virtual desktop" just like you would if you were sitting at a computer at the college.

**Note:** *Although remote desktop works over a dial up connection, intense screen animation will be very slow. Similarly, file transfers through RDS will be slow.*

### To Disconnect:

1. From the Start menu select "log off".
2. In the "are you sure" box click on "log off".
