8. GET CAUGHT UP ON THE THINGS YOU NEED TO KNOW ABOUT YOUR PROGRAM

Welcome to Civil Technology!

For this program, students are expected to own or acquire a laptop computer with the specifications detailed on our [Technology Requirements webpage](#) and bring on campus when instructed.

Take your skills and knowledge to another level and experience real-world applications in research, planning, drafting and project management.

This two-year diploma specialization provides students who have completed their Civil Technician certificate with an opportunity to learn about Civil Technology in greater detail. Learn about terrain analysis, fluid mechanics, geotechnical materials, groundwater flow and analysis, roadway design, and water and wastewater piping system design—all with an emphasis on project management.

Students will use the drafting and problem-solving skills learned in the Civil Technician certificate to develop real industry infrastructure designs and plans that could be built in the field. Throughout your final year, plan and create an Applied Research Project using the skills you've honed throughout the program. Participate in a co-operative work placement and gain experience in real-life industry conditions.

Enhance your technical skills in surveying and AutoCAD and learn how environmental features like construction and water affect infrastructure. In this program, you will focus on project management, planning and communication to ensure you are ready for the career responsibilities in this field.

Graduates may pursue careers in surveying, materials testing, drafting and report preparation. Career opportunities may be in the field or in an office environment helping technologists and engineers design and construct infrastructure related projects.
