

MANURE MANAGEMENT PLANNER

In Manitoba, the application of livestock manure to land must be as a fertilizer for crop production. Many livestock operations must submit an annual Manure Management Plan (MMP) to Manitoba Agriculture & Resource Development. Livestock producers can prepare a Manure Management Plan themselves or with the assistance of a qualified Manure Management Planner.

Would you like to become a qualified Manure Management Planner?

Manure Management Planners that prepare plans required by Manitoba Agriculture & Resource Development must have successfully completed the Manure Management Planner Course and be members in good standing of the Manitoba Institute of Agrologists (MIA) or Certified Crop Advisors.

Assiniboine Community College is offering an approved training course for Manure Management Planners that was developed in partnership with Manitoba Agriculture & Resource Development and the Manitoba Institute of Agrologists. It consists of a home study manual, a two-day seminar, a manure management planning assignment and a closed-book, multiple-choice exam.

“Prerequisite: Member of the Manitoba Institute of Agrologists or designation of Certified Crop Advisor”
