11. GET CAUGHT UP ON THE THINGS YOU NEED TO KNOW ABOUT YOUR PROGRAM

Welcome to Land and Water Management!

Ready for a progressive career in natural resource management? Be part of the solution on how we manage our essential land and water resources.

Passion for the outdoors makes you a great candidate for a career in natural resources. This exciting program brings together natural resources, technology and the environment in an agricultural context. Understand the interconnection between our water and the land. Learn how to protect, manage, sustain and conserve natural habitats for wildlife and humans.

With Land and Water Management, you will often be out in the field, examining key features of the prairie agro-ecological landscape. Become skilled at monitoring and evaluating the quality of rural land and water resources, and at managing activities so that those resources are used sustainably. You will use environmental monitoring equipment to study water, land and air conditions.

Consider a career as a water manager, habitat specialist or environmental technician. You may also find a position in research, management, consulting and administration of sustainable land use practices. If you like working with science and are concerned about the environment and the quality of our natural resources, Land and Water Management is perfect for you!

Your career can take you to both rural and urban settings. The program's four-month paid co-operative work experience will help you with real-world experience, create connections within industry and become confident in your abilities. Once you graduate, you will find yourself ready for exciting and challenging roles in industry including conservation districts, agricultural organizations and all levels of government across the Prairies and beyond.

Students should expect to be on campus for approximately 50% of their program in the fall. 'Learn by doing' through the use of college facilities and equipment continues to be an important aspect of this program. Students will study remotely for remaining portions of their program.

For this program, students are expected to own or acquire a laptop computer with the specifications detailed on our [Technology Requirements webpage](#) and bring it on campus when instructed.

Students in this program are also required to have a smartphone (e.g., iPhone or Android) capable of running location enabled applications.
