

COMMERCIAL MANURE APPLICATOR

This program prepares students to write the examinations required for licensing as Commercial Manure Applicator or Off-farm Manure Applicator in Manitoba.

A **Commercial Manure Applicator** is a person who transports manure, or applies it to land, for payment.

An **Off-farm Manure Applicator** is a person (or group of persons) whose livestock operation produces 300 animal units or more worth of manure from any type of livestock and who intends to apply any of the manure to land that they do not own or lease, without using a commercial manure applicator to apply it.

Under The Pesticides and Fertilizers Control Act and Manure Regulation, Commercial and Off-farm Manure Applicators in Manitoba must be trained and licensed.

Manitoba Agriculture and Resource Development, Manitoba Conservation and Climate and Assiniboine Community College and industry partners have created Commercial Manure Applicator Courses for training. The courses include a training manual, workshop and open book exam.

Online course delivery begins March 1, 2021.

Exams to be written online in April 2021.

Course cost (including manual, seminar, assignment and exam) - \$400.00
