

MANURE MANAGEMENT PLANNER

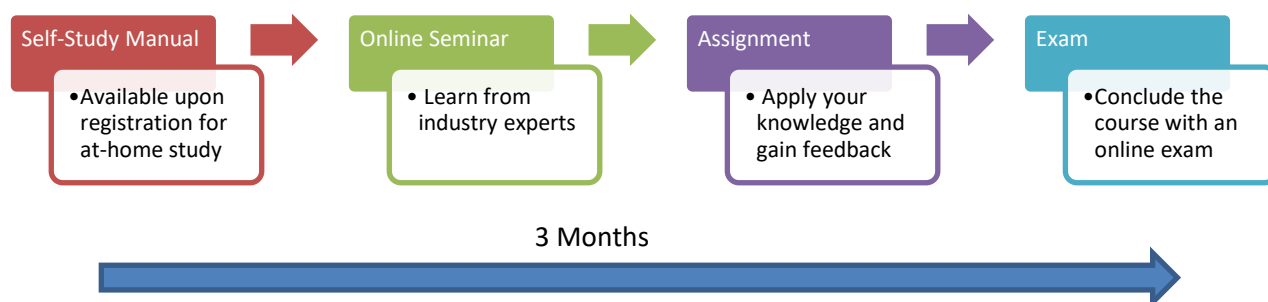

In Manitoba, the application of livestock manure to land must be as a fertilizer for crop production. Many livestock operations must submit an annual Manure Management Plan (MMP) to Manitoba Conservation and Climate. Livestock producers can prepare a Manure Management Plan themselves or with the assistance of a qualified Manure Management Planner.

Become a qualified Manure Management Planner

Manure Management Planners that prepare plans required by Manitoba Climate and Conservation must have successfully completed the Manure Management Planner Course and be members in good standing of Agrologists Manitoba (Manitoba Institute of Agrologists) or Certified Crop Advisors.

Assiniboine Community College offers an approved training course for Manure Management Planners that was developed in partnership with the government of Manitoba and Agrologists Manitoba. It consists of a home study manual, an online seminar, a manure management planning assignment and a closed-book, multiple-choice exam completed online.

Prerequisite: Member of Agrologists Manitoba or designation of Certified Crop Advisor

Online course delivery begins March 1, 2021.

Exams to be written online in May 2021.

Course cost (including manual, seminar, assignment and exam) - \$850.00
