## AERIAL APPLICATION

Is an excellent alternative for areas where a ground unit cannot operate due to wet soil conditions.

Aerial application is often the safest, fastest, most efficient, and economical way to treat a crop and forestry when pests or disease threaten it.

## OUR FLEET

We currently have 13 turbine Air Tractors in our fleet, with new GPS technology. We use a variety of nozzles on our aircrafts to ensure proper application for every scenario, including atomizers, CP's and micronairs.

## OUR PEOPLE

Our maintenance shop equipped with our highly qualified engineers ensures our planes are kept in the air. Our pilots have thousands of flight hours over the standard hundreds, making them more qualified to handle our advanced technology in location software. We strive towards providing quality in all areas of our work.
